

The Safety Trade System Rules

The Safety Trade .com

4-15-23

RULES - EVERYONE - BEGINNERS

SET UPS - ANY TIME FRAME - 1m, 5m, 15m, 30m, 1h, 4h, D, W, M.
LOOK FOR LOGO LINES on back of the above bull!

Have 2 charts open but only use 1 chart to trade.

I.E. - Have the 5m & 1m charts open but only use the 1m chart to trade and the 5m chart for verification.

The following are all sell stop examples. Just reverse it for a buy.

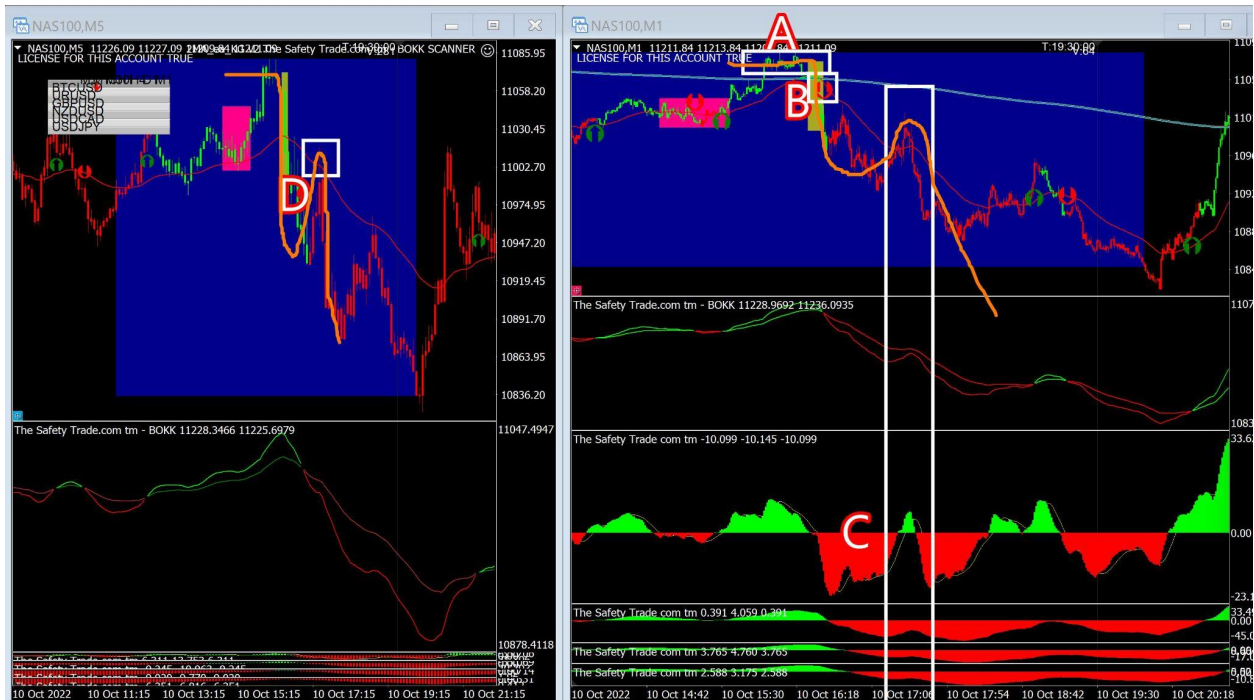

Set up #1 - THE PERFECT SAFETY TRADE - SELL STOP

- A. On 1m chart - Candles start above The Safety Trade.com Line Color Change red/green line,
- B. Red down arrow pops up on same 1m chart.
- C. A perfect Super safety Trade Sell Stop Forms on the same 1m chart. (TO be clear - wait until bottom tsts indicator is red, the second to the bottom tsts indicator is red, the third to the bottom tsts is red and the fourth tst indicator turns green, the BOKK indicators 2 lines are both red, the candles are red and the candles have come back up and retested and I mean came back up and touched or came close to touching or went slightly over this line).
- OPTIONAL**-But recommended after beginners stage -
- D. Confirm the 5m candles have come back up and retested The Safety Trade.com Line Color Change red/green line. (By retested I mean came

back up and touched or came close to touching or went slightly over this line).

- E. When all of the above happens for the 1st time - place 1 or 2 sell stops below 1m charts - The Safety Trade.com Line Color Change red/green line.

FOLLOW the specific rules to finish the trade out.

Only trade this trade until you perfect it.

Then you can try the following other two types of trades.

INTERMEDIATE- ADVANCED RULES

Set up #2 - Fill in the Gap Sell Stop Safety Trade

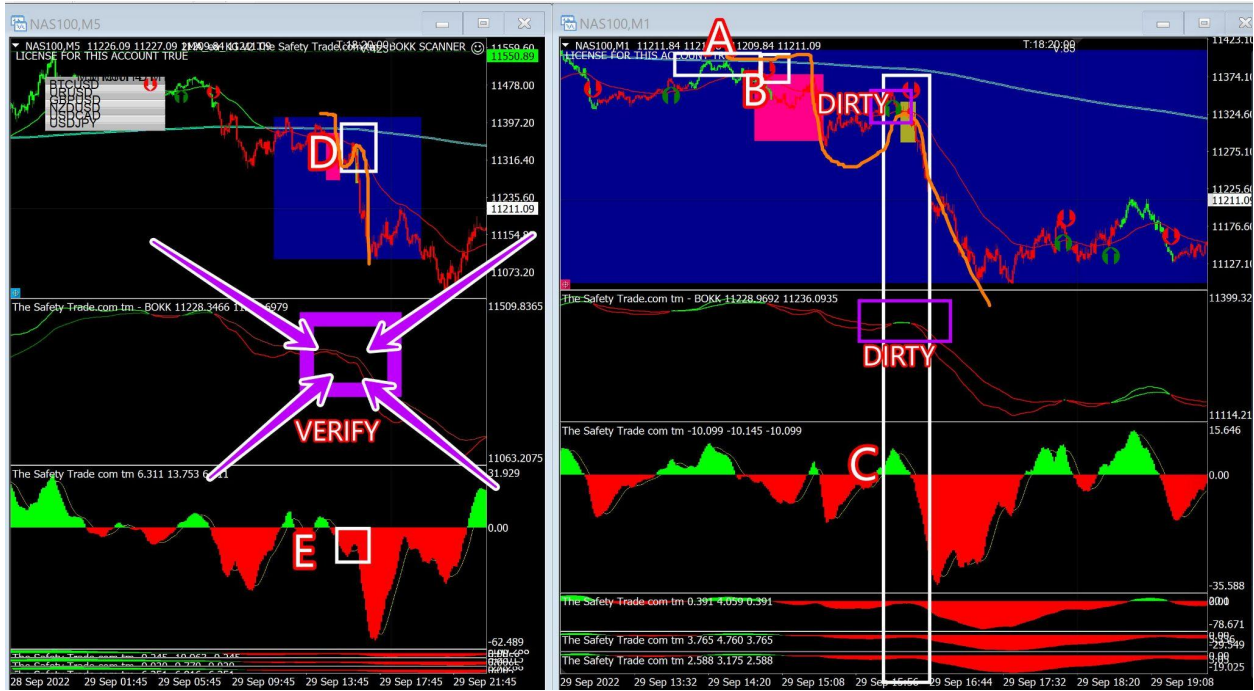

- A. On 1m chart - Candles start above The Safety Trade.com Line Color Change red/green line,
- B. Red down arrow pops up on same 1m chart.
- C. A perfect Super safety Trade Sell Stop Forms on the same 1m chart. (TO be clear - wait until bottom tsts indicator is red, the second to the bottom tsts indicator is red, the third to the bottom tsts is red and the fourth tst indicator turns green, the BOKK indicators 2 lines are bothe red, the candles are red and the candles have came back up and retested and I mean came back up and touched or came close to touching or went slightly over this line).
- D. Confirm the 5m candles have come back up and retested The Safety Trade.com Line Color Change red/green line. (By retested I mean came back up and touched or came close to touching or went slightly over this line).
- E. CONFIRM THE 5 MINUTES CHARTS FOURTH TSTS FROM THE BOTTOM IS RED AND HAS A BLACK GAP IN BETWEEN THE RED HISTOGRAM BARS AND THE YELLOW.
- F. When all of the above happens for the 1st time - place 1 or 2 sell stops below 1m charts - The Safety Trade.com Line Color Change red/green line.

FOLLOW the specific rules to finish the trade out.

Set up #3 - DIRTY Sell Stop Safety Trade

If either above set ups on the 1M chart has green BOKK lines or a green ma line or a green arrow - just look to the 5M chart and verify that charts 2 BOKK lines are red - if they are then the current sell trade is valid.

- G. Please do not email asking how to get the scanners - because it is in your typeform email on how to do that.

**Please understand that we expect
&
teach PERSONAL TRADING RESPONSIBILITY.**

Specific Rules -Trading

1. If you dont see a clear safety trade on 1 time frame **look to the next higher one and so on until you find one.**
Keep checking the 1m and 5m to see if they form while waiting for the higher time frames to develop.
2. **The order** in which the safety trades develop is - 1m, 5m, 15m, 30m, 1h, 4h, D, W, M.
3. **You may open more than 1 safety trade at a time.**
But keep in mind **not to get caught** in a higher time frame safety trade. For example, if youre waiting for a 1 hour sell stop to form it must go up to form it and it may trigger your 4 hour buy stop if you have that set too close. **So dont get suckered into that.** Give the 1 hour room to breath, to move up. ***Besides the 4 hour is just there to see if/when the 1 hour candles will bounce of the 4 hours red line.***
4. Once one safety trade finishes - **look to the next higher time frame** for another safety trade.
5. As soon as a safety trade is triggered **set your stop loss** to above the pivot point.
 - a. If the stop loss is ever hit. Take the L. Then re-evaluate the same trade - if still valid - ***re-enter by placing another sell stop.***
6. **Take profit - 1-2-3 pips.**
Advanced option - **open 2 sell stop orders OR MORE** at .01 lot size or a .02 lot size sell stop.
Once you see 2 - 20 pips profit is seen depending on what symbol you are trading - close one order and then move remaining order at break even or slight profit by moving your stop loss to slightly below where you entered. Do not try to use a trailing stop or keep your stop loss too close to the trade because you will get tapped.
Generally speaking, the higher the time of the chart, the more pips you'll make and the longer you can hold the trade.

7. **Always move your sell/buy stop line order down/up with the price/candle movement.** Keep the line close to the red line but not too close.

8. **Always thank God -**
Always do good with your profits -
Always have my back.
